

PRAMISH THAPA

SOFTWARE ENGINEER

London, United Kingdom • +44 7587 402388 • pramish.thapa17@gmail.com

Experienced Software Engineer with 3+ years in designing, implementing, and maintaining scalable cloud-based applications. Skilled in cloud platforms (AWS, GCP) and microservices architecture. Strong collaborator in Agile teams, handling the full Software Development Life Cycle (SDLC) from development to production deployment, ensuring smooth and timely delivery.

Skills

- **Database:** MySQL, MongoDB, PostgreSQL, Cloud Firestore (GCP), Amazon S3 (AWS)
- **Programming Languages:** Java, Python, JavaScript
- **Web Technologies & Frameworks:** HTML5, CSS3, React, Spring Boot, Bootstrap
- **Messaging Channels:** GCP Pub/Sub, Apache Kafka
- **Security Scan:** Fortify, SonarQube
- **Cloud Platform:** GCP, AWS
- **CI/CD:** Jenkins, Docker, Kubernetes
- **Infrastructure-as-Code:** Ansible

Work History

Software Engineer, 09/2021 to 06/2023

Oncore Software Solutions Pvt. Ltd. – Kathmandu, Nepal

- Worked on Equifax's credit risk and identity verification systems on GCP, enabling secure customer onboarding, fraud prevention, and real-time credit scoring by leveraging Cloud Pub/Sub, Firestore, and Cloud Run.
- Set up and maintained CI/CD pipelines in Jenkins, automating build, test, and deployment processes. This improved release cycles by around 35% and helped cut down on production errors.
- Ensured high code quality by achieving 95% unit test coverage with JUnit and Mockito, and applying static code analysis tools such as SonarQube and Fortify to meet security and compliance requirements.
- Produced High-Level Design (HLD) documents and detailed sequence diagrams to illustrate microservice architecture and data flow, while actively contributing to sprint planning and technical reviews in Agile teams across multiple regions.

Software Engineer, 01/2020 to 06/2021

InfoxIT Pvt. Ltd. – Butwal, Nepal

- Designed and maintained backend modules for accounting, inventory, and dairy management systems using Java, Spring, Hibernate, and MySQL, ensuring efficient schema design and smooth ORM mappings.
- Contributed to the development of a modular ERP platform for banks and educational institutions, implementing features such as payroll automation, invoice generation, and inventory tracking to improve operational efficiency.
- Collaborated using Git and GitHub/GitLab, managing branches, performing code reviews, and resolving merge conflicts within an Agile Scrum workflow.
- Participated in requirement gathering, sprint planning, and client demos, gaining hands-on experience across the full software development lifecycle (SDLC).

Volunteer Experience

Technical Lead, 10/2024 to Current

Miphrung Youth Club - London, United Kingdom

- Built and maintained the club's website, focusing on usability and accessibility for members.
- Supported online events and workshops by providing technical assistance, helping engage over 300 participants.
- Introduced and implemented digital tools that strengthened communication and boosted community involvement.

Professional Development

Full Stack Development Programme, 01/2025 to Present

IT Career Switch - London, United Kingdom

Hands-on development training covering backend systems, REST APIs, modern JavaScript frameworks, and deployment workflows.

DevOps Engineering Programme, 08/2025

ThinkCloudly - London, United Kingdom

Structured training focused on CI/CD pipelines, Docker, Kubernetes, infrastructure automation, and cloud deployment practices.

Projects

Project-1: Smart Building Energy Prediction System

- Developed and deployed a machine learning system using Python, Pandas, Linear Regression, and Random Forest to predict and visualize energy consumption trends.
- Implemented interactive data visualizations to provide clear insights into energy usage patterns.
- Built a full-stack web application with React (frontend) and Flask (backend), deployed on Heroku for real-time monitoring and predictive analysis.

Project-2: Electrify – EV Charging Station Locator

- Collaborated within a team to design and develop an application for locating EV charging stations across the UK.
- Built user-focused features using Java, MongoDB, and third-party APIs for geolocation and station data.
- Utilized Jenkins for CI/CD and Notion for project coordination, ensuring smooth delivery and team collaboration.

Project-3: Airline Seat Booking System

- Designed and developed a full-stack airline booking system using React, Node.js, and MySQL on AWS RDS.
- Implemented a seat allocation algorithm that optimizes group seating and avoids isolated single seats, improving booking efficiency.
- Deployed the system using AWS Amplify, with logging and monitoring managed via AWS CloudWatch.
- Delivered a real-time seating plan interface prioritizing user experience, scalability, and efficient seat management.

Education

MSc. Software Engineering, Distinction

University of West London - London, United Kingdom, 09/2024

- Enhancing Smart Building Operations through Digital Twin Technology and IoT Integration - implemented machine learning models (Linear Regression, Random Forest) to process real-time building operation data.
- Relevant modules: Big Data Analytics, Machine Learning, Advanced Topic in Software Engineering, Web Development, Human Computer Interaction for Information System.

Bachelor of Computer Information System, 2:1

Pokhara University - Butwal, Nepal, 07/2021
